PRELIMINARY STORM WATER NOTE:
Due to the large undeveloped area on the north side of this parcel and the existing basin like shape of the lot, minimal grading will be required to contain the incremental storm water produced from the new impervious area proposed. Initial calculations indicate there is ample space to catch the first flush from the site, including all parking lot and animal containment areas. Control of run-off from the site can be managed with a simple basin and outfall structure, the preliminary design of which is shown hereon.

EROSION CONTROL NOTE:
The total area disturbed to make the proposed improvements is less than 1/4 of an acre and a Land Disturbance Permit and Stormwater Pollution Prevention Plan are not required by the State of Missouri. Nonetheless, best management practices, including some erosion control measures, seeding and mulching of disturbed areas shall be implemented as required to contain silts on site.
